

Fix for sound not coming out of headphones

Note: These instructions assume that you do not have sound muted.

1. Click on the bottom right corner of the screen, preferably on top of the time.

2. A status tray should show up. Click on the small arrow next to the volume slider.

3. Make sure that the output is set to headphone (there is a check mark next to it). If not, click on the headphone title and a check mark should appear next to it.
